

# Kubernetes Cheat Sheet

## 1 Common Commands

Name	Command
Run nginx deployment with 2 replicas	<code>kubect1 run my-nginx --image=nginx --replicas=2 --port=80</code>
Run nginx pod and expose it	<code>kubect1 run my-nginx --restart=Never --image=nginx --port=80 --expose</code>
Run nginx deployment and expose it	<code>kubect1 run my-nginx --image=nginx --port=80 --expose</code>
List pods with nodes info	<code>kubect1 get pod -o wide</code>
List everything	<code>kubect1 get all --all-namespaces</code>
Get all services	<code>kubect1 get service --all-namespaces</code>
Show nodes with labels	<code>kubect1 get nodes --show-labels</code>
Validate yaml file with dry run	<code>kubect1 create --dry-run --validate -f pod-dummy.yaml</code>
Start a temporary pod for testing	<code>kubect1 run --rm -i -t --image=alpine test-\$RANDOM -- sh</code>
kubect1 run shell command	<code>kubect1 exec -it mytest -- ls -l /etc/hosts</code>
Get system conf via configmap	<code>kubect1 -n kube-system get cm kubeadm-config -o yaml</code>
Get deployment yaml	<code>kubect1 get deployment mysql -o yaml</code>
Explain resource	<code>kubect1 explain pods, kubect1 explain svc</code>
Watch pods	<code>kubect1 get pods -n &lt;namespace&gt; --watch</code> <code>kubect1 get pods --watch</code>

Open a bash terminal in a pod	<code>kubectl exec -it storage sh</code>
Check pod environment variables	<code>kubectl exec &lt;podname&gt; env</code>
<b>Kubectl apply a folder of yaml files</b>	<code>kubectl apply -R -f .</code>
Get services sorted by name	<code>kubectl get services --sort-by=.metadata.name</code>
Get pods sorted by restart count	<code>kubectl get pods --sort-by='.status.containerStatuses[0].restartCount'</code>
List pods and images	<code>kubectl get pods -o='custom-columns=PODS:.metadata.name,Images:.spec.containers[*].image'</code>

## 1.2 Check Performance

Name	Command
Get node resource usage	<code>kubectl top node</code>
Get pod resource usage	<code>kubectl top pod</code>
Get resource usage for a given pod	<code>kubectl top &lt;podname&gt; --containers</code>
List resource utilization for all containers	<code>kubectl top pod --all-namespaces --containers=true</code>

## 1.3 Resources Deletion

---

Name	Command
Delete pod	<code>kubectl delete pod/&lt;pod-name&gt; -n &lt;my-namespace&gt;</code>
Delete pod by force	<code>kubectl delete pod/&lt;pod-name&gt; --grace-period=0 --force</code>
Delete pods by labels	<code>kubectl delete pod -l env=test</code>
Delete deployments by labels	<code>kubectl delete deployment -l app=wordpress</code>
Delete all resources filtered by labels	<code>kubectl delete pods,services -l name=myLabel</code>
Delete resources under a namespace	<code>kubectl -n my-ns delete po,svc --all</code>
Delete persist volumes by labels	<code>kubectl delete pvc -l app=wordpress</code>
Delete statefulset only (not pods)	<code>kubectl delete sts/&lt;stateful_set_name&gt; --cascade=false</code>

## 1.4 Log & Conf Files

---

Name	Comment
Config folder	<code>/etc/kubernetes/</code>
Certificate files	<code>/etc/kubernetes/pki/</code>
Credentials to API server	<code>/etc/kubernetes/kubelet.conf</code>
Superuser credentials	<code>/etc/kubernetes/admin.conf</code>
kubectl config file	<code>~/.kube/config</code>
Kubernets working dir	<code>/var/lib/kubelet/</code>

Docker working dir	/var/lib/docker/, /var/log/containers/
Etcd working dir	/var/lib/etcd/
Network cni	/etc/cni/net.d/
Log files	/var/log/pods/
log in worker node	/var/log/kubelet.log, /var/log/kube-proxy.log
log in master node	kube-apiserver.log, kube-scheduler.log, kube-controller-manager.log
Env	/etc/systemd/system/kubelet.service.d/10-kubeadm.conf
Env	export KUBECONFIG=/etc/kubernetes/admin.conf

## 1.5 Pod

Name	Command
List all pods	kubectl get pods
List pods for all namespace	kubectl get pods -all-namespaces
List all critical pods	kubectl get -n kube-system pods -a
List pods with more info	kubectl get pod -o wide, kubectl get pod/<pod-name> -o yaml
Get pod info	kubectl describe pod <podname>
List all pods with labels	kubectl get pods --show-labels
List running pods	kubectl get pods --field-selector=status.phase=Running
Get Pod initContainer status	kubectl get pod --template '{{.status.initContainerStatuses}}' <pod-name>
kubectl run command	kubectl exec -it -n "\$ns" "\$podname" -- sh -c "echo \$msg >>/dev/err.log"
Watch pods	kubectl get pods --watch

Get pod by selector	<code>kubectl get pods --selector="app=syslog" -o jsonpath='{.items[*].metadata.name}'</code>
List pods and images	<code>kubectl get pods -o='custom-columns=PODS:.metadata.name,Images:.spec.containers[*].image'</code>
List pods and containers	<code>-o='custom-columns=PODS:.metadata.name,CONTAINERS:.spec.containers[*].name'</code>

## 1.6 Label & Annotation

Name	Command
Filter pods by label	<code>kubectl get pods -l owner=denny</code>
Manually add label to a pod	<code>kubectl label pods &lt;podname&gt; owner=denny</code>
Remove label	<code>kubectl label pods &lt;podname&gt; owner-</code>

## 1.7 Deployment & Scale

Name	Command
Scale out	<code>kubectl scale --replicas=3 deployment/nginx-app</code>
List rollout	<code>kubectl get rs</code>
Check update status	<code>kubectl rollout status deployment/nginx-app</code>
Check update history	<code>kubectl rollout history deployment/nginx-app</code>
Pause/Resume	<code>kubectl rollout pause deployment/nginx-deployment, resume</code>
Rollback to previous version	<code>kubectl rollout undo deployment/nginx-deployment</code>

## 1.8 Quota & Limits & Resource

Name	Command
------	---------

List Resource Quota	kubectl get resourcequota
List Limit Range	kubectl get limitrange
Customize resource definition	kubectl set resources deployment nginx -c=nginx --limits=cpu=200m
Customize resource definition	kubectl set resources deployment nginx -c=nginx --limits=memory=512Mi

## 1.9 Service

Name	Command
List all services	kubectl get services
List service endpoints	kubectl get endpoints
Get service detail	kubectl get service <servicename> -o yaml
Get service cluster ip	kubectl get service nginx-service -o go-template='{{.spec.clusterIP}}'
Get service cluster port	kubectl get service nginx-service -o go-template='{{(index .spec.ports 0).port}}'
Expose deployment as lb service	kubectl expose deployment/my-app --type=LoadBalancer --name=my-service
Expose service as lb service	kubectl expose service/wordpress-1-svc --type=LoadBalancer --name=ns1

## 1.10 Secrets

Name	Command
------	---------

List secrets	kubectl get secrets --all-namespaces
Generate secret	echo -n 'mypasswd'   base64 --decode
Get secret	kubectl get secret denny-cluster-kubeconfig
Get a specific field of a secret	kubectl get secret denny-cluster-kubeconfig -o jsonpath="{.data.value}"
Create secret from cfg file	kubectl create secret generic db-user-pass --from-file=./username.txt

## 1.11 StatefulSet

Name	Command
List statefulset	kubectl get sts
Delete statefulset only (not pods)	kubectl delete sts/<stateful_set_name> --cascade=false
Scale statefulset	kubectl scale sts/<stateful_set_name> --replicas=5

## 1.12 Volumes & Volume Claims

Name	Command
List storage class	kubectl get storageclass
Check the mounted volumes	kubectl exec storage ls /data
Check persist volume	kubectl describe pv/pv0001
Copy local file to pod	kubectl cp /tmp/my <some-namespace>/<some-pod>:/tmp/server
Copy pod file to local	kubectl cp <some-namespace>/<some-pod>:/tmp/server /tmp/my

## 1.13 Events & Metrics

Name	Command
View all events	kubectl get events --all-namespaces

List Events sorted by  
timestamp

kubectl get events --sort-  
by=.metadata.creationTimestamp

## 1.14 Node Maintenance

Name	Command
Mark node as unschedulable	kubectl cordon \$NODE_NAME
Mark node as schedulable	kubectl uncordon \$NODE_NAME
Drain node in preparation for maintenance	kubectl drain \$NODE_NAME

## 1.15 Namespace & Security

Name	Command
List authenticated contexts	kubectl config get-contexts, ~/.kube/config
Set namespace preference	kubectl config set-context <context_name> -- namespace=<ns_name>
Load context from config file	kubectl get cs --kubeconfig kube_config.yml
Switch context	kubectl config use-context <cluster-name>
Delete the specified context	kubectl config delete-context <cluster-name>
List all namespaces defined	kubectl get namespaces
